

Continuous Delivery Is Important

- Delivering multiple features all as one package does not make customer satisfied.
- However continuous delivery indeed has proved that features continuous delivery does make customer satisfied.

Continuous
Integration + Continuous
Deployment = Continuous
Delivery

Before & After

| | | |
|----------------------------|--|---------------------------------|
| Compile/Lint | <i>Human</i> | CI |
| Merge/Integrate | <i>Human</i> | CI |
| Run Unit Tests | <i>Human, Hit or Miss, Easily Bought Off with Pressure</i> | CI |
| Run Integration Tests | <i>Human, Hit or Miss, Easily Bought Off with Pressure</i> | CI |
| Verify Dependency Security | <i>Human, Often Not Done</i> | CI |
| Deploy to Test Env | <i>Human, Problematic, Missed Steps</i> | CD |
| Team Test | <i>Human, Time Consuming</i> | CD - Automated Acceptance Tests |
| Deploy to Client Test Env | <i>Human, Problematic, Missed Steps</i> | CD |

Signs of CI/CD Need

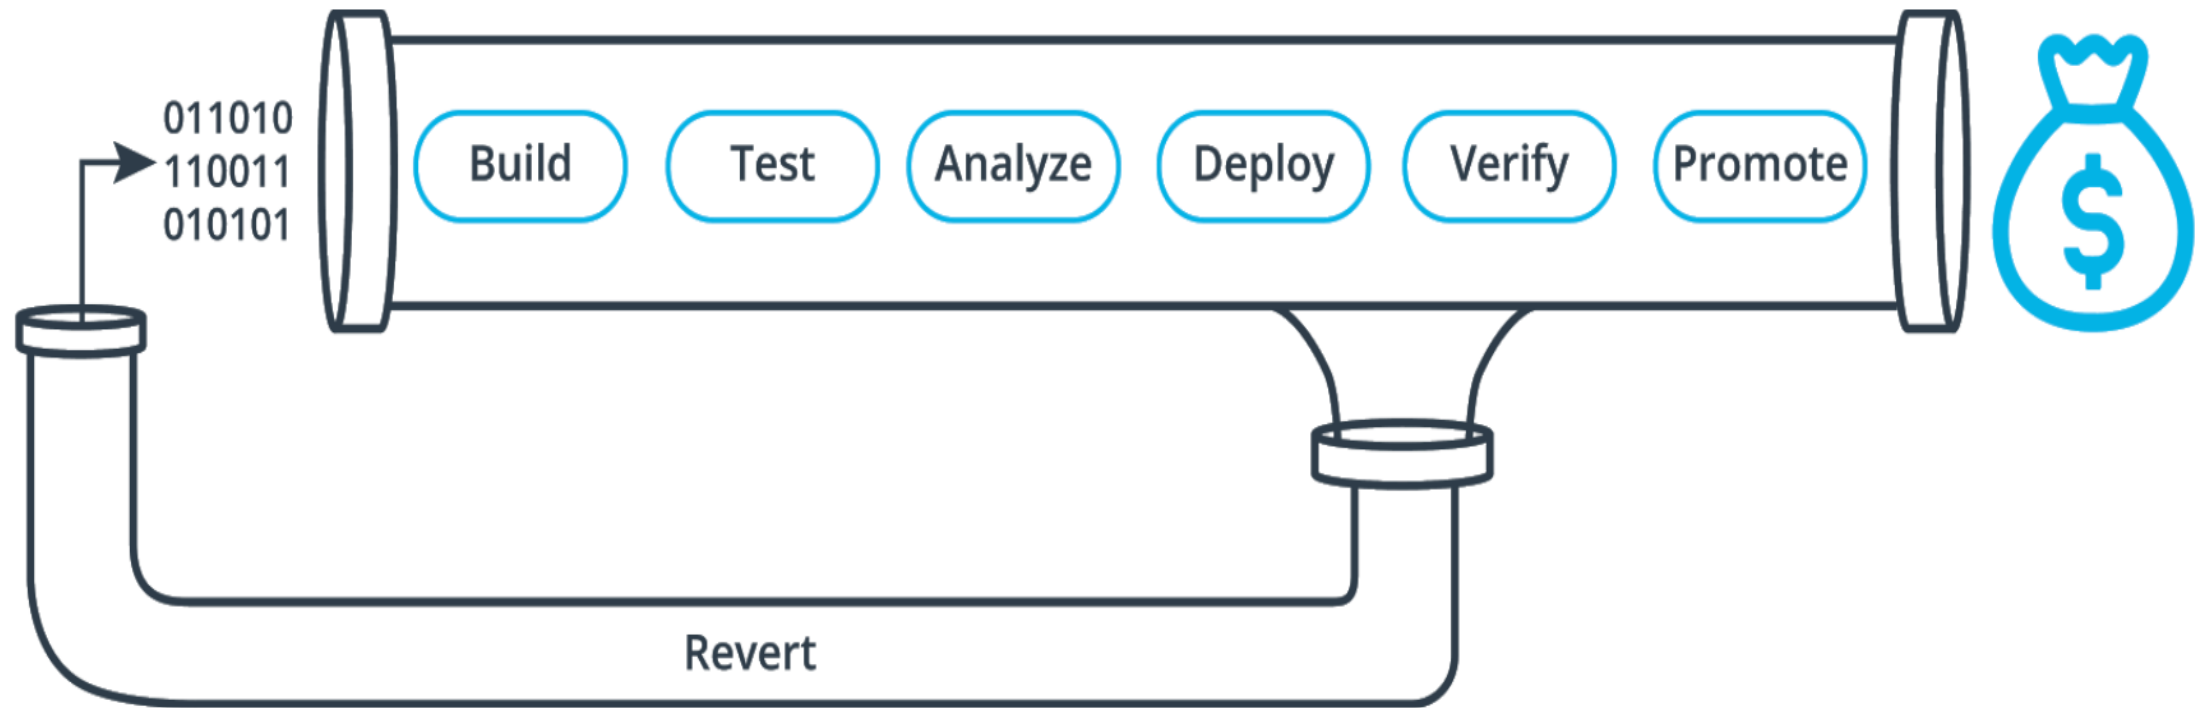

- Investing **more time** in a release cycle than delivering value
- Going through integration hell every time we finish a feature
- **Code gets lost** because of botched merges
- Unit test suite hasn't been green in ages
- Deployments contribute to **schedule slip**
- Friction between ops and development departments
- **Only one engineer** can deploy a system
- ***Deployments are not cause for celebration***

Tech / Finance : One Team & One Language

| Technical Language | Value | Translation |
|---|------------------|---|
| Catch Compile Errors After Merge | Reduce Cost | Less developer time on issues from new developer code |
| Catch Unit Test Failures | Avoid Cost | Less bugs in production and less time in testing |
| Detect Security Vulnerabilities | Avoid Cost | Prevent embarrassing or costly security holes |
| Automate Infrastructure Creation | Avoid Cost | Less human error, Faster deployments |
| Automate Infrastructure Cleanup | Reduce Cost | Less infrastructure costs from unused resources |
| Faster and More Frequent Production Deployments | Increase Revenue | New value-generating features released more quickly |
| Deploy to Production Without Manual Checks | Increase Revenue | Less time to market |
| Automated Smoke Tests | Protect Revenue | Reduced downtime from a deploy-related crash or major bug |
| Automated Rollback Triggered by Job Failure | Protect Revenue | Quick undo to return production to working state |

CI / CD Pipelines

The CI/CD Pipeline

One Solution Not The Solution
